

Kieselgur 250 g | 250 g

100% natural diatoms, very finely ground - highly drying grit for application in stables and household, respectively

Product number	278
Weight	0.25kg
Length	75mm
Width	75mm
Height	180mm

Product description

Special product (powder) – dry adjuvant

100% natural diatoms, very finely ground - highly drying grit for application in stables and household, respectively

Kieselgur consists of the ground skeletons of fossil diatoms, the so-called 'diatoms'. These skeletons consist of silicon oxide. The use of kieselgur as a natural raw material is becoming increasingly important. Its absorptive capacity is used wherever liquid or moisture needs to be bound.

Kieselgur is also approved for use in animal feed in accordance with EU regulations for all animal species. This means that it is extremely safe to use in the immediate vicinity of animal feed.

Kieselgur cannot be overdosed. The quantity applied to the required areas depends on the nature of the material. A light-colored coating should be visible everywhere on the treated areas.

Expert tip: If the powder becomes a little damp, leave it open on the heating to dry. **Kieselgur** is also available as **Kieselgur Liquid Powder** for dust-free wet application.

Product properties

Composition	Diatomeenerde
Product type	Spezialprodukt - Trockenhilfsstoff
Area of Application	Umgebungsbehandlung
Product form	Powders
