

Singulares Elm Bark (European) 200 g | 200 g

Natural feed material for the natural support of the intestinal flora made of 100% pure elm bark without additives and purely natural

Product number	1660
Weight	0.2kg
Length	98mm
Width	98mm
Height	160mm

Product description

The elm bark is rich in nutrients, minerals and trace elements. Contained bitter and tannins stimulate intestinal peristalsis. The stomach, liver, gall bladder, pancreas and intestines multiply their digestive juices. The self-regulation of the gastrointestinal tract is positively influenced, and digestive complaints can be significantly reduced. A well-functioning digestive system can significantly promote an intact intestinal flora.

We use European species for our Singulares Elm Bark (European), which are characterized in particular by the high content of tanning agents and less by the strong mucus formation attributed to the American/Canadian species. In phytotherapy, components containing tanning agents are always the first choice for indigestion associated with diarrhea. Mucous agents are completely unsuitable because, possibly, they may provide an even better breeding ground for the unwanted bacteria. Anaerobic germs, in particular, can reproduce even better under exclusion of oxygen under the mucus, while tannins deprive them of their livelihood and also inhibit the absorption of toxins in the intestine.

Products containing mucous agents can be used in retrospect to alleviate any irritation. Our recommendation cdVet Gastric Protection.
