Product description

CBD - meets dentaVet oil - our DreamTeam for dental care

Also in the area of dental care, the regular use of CBD Oil denta can contribute to oral hygiene. The combination of

CBD with the proven dentaVet Oil ingredients can positively support the oral flora, create a bacteria-hostile ambience, and thereby significantly reduce plaque and tartar formation.

Due to its oily consistency, it not only gets into the smallest interdental spaces very well, but also adheres to the teeth longer. This leads to an even more intensive care. Gum and tooth problems can not only be unpleasant, they also quickly wear on the nerves and stress our four-legged friends. CBD can also address this issue and promote inner peace with its calming and relaxing properties.

strengthens the muzzle flora and reduces muzzle odor
 sustainably strengthens the teeth and gums
 the oily consistency allows longer adhesion and thus has a more intensive effect
 provides an effective supplement to dental and muzzle hygiene
 soothes and relaxes

Dogs with MDR1 gene defect: There are no reliable studies on the tolerability of CBD products regarding dogs with MDR1 gene defect. Therefore, feeding of dogs with MDR1 gene defect should be done in consultation with your veterinarian or veterinary practitioner.

We recommend the following alternative cdVet products for dogs with MDR1 gene defect: dentaVet Oil, dentaVet Gel, dentaVet Spray.
