Feed supplement for horses and ponies for the supply of wild herbs for a worm-hostile intestinal environment

Product number	2058
Weight	0.3kg
Length	98mm
Width	98mm
Height	127mm

Product description

EquiGreen WK-Mix was developed for the special nutritional needs that arise in connection with colonization by worms. The lack of herbal ingredients, such as saponins, bitter substances, and tannins, can make our pets susceptible to excessive colonization by worms. In contrast to their conspecifics living in the wilderness, they often do not have the opportunity to absorb those substances through plants and herbs. However with their wild relatives, precisely these substances lead to avoid an excessive, pathological colonization by worms.

In order to have less often a reason for chemical deworming cures, the animal's intestine should therefore be supported with appropriate herbs that are contained in EquiGreen WK-Mix. Besides of a balanced diet, you can achieve this by the occasional addition of the complementary feed EquiGreen WK-Mix, which can compensate for the lack of herbal ingredients, such as saponins, bitter substances and tannins. In addition, many specialists for parasitology recommend checking the colonization by worms of the animal by regularly monitoring the faeces samples.

Product properties

Phase of life	Seniors, Adults, Juniors
Special Requirements	Health, Worm defense, Intestines, Mucous membrane protection, Internal organs
Composition	Wild garlic, Coconut, Carrot, Thyme, Walnut, Lemon balm, Dandelion, Coriander, Ash, Rosehip, Pumpkin, Wormwood, Southernwood
