

EnteroVet 1 L | 1 l

Supports digestion and feed conversion even during feed changes.

Product number	10212
Weight	1.013kg
Length	88mm
Width	88mm
Height	230mm

Product description

EnteroVet nutritionally-related supports the condition of the intestinal flora. A well-conditioned and immune-enhanced intestinal ambience makes it more difficult for endoparasites to colonize in the intestine. This in turn also lowers the germ pressure in the stable, as fewer pathogenic germs are consequently excreted. Therefore, a healthy intestine is of particular importance for keeping animals healthy. This problem is particularly serious in the case of young animals, whose immune system is not yet fully developed and which are exposed to particular burdens from microorganisms that are new to them as a result of being re-stalled. Therefore, the reduction of germ pressure and thus the establishment of a healthy intestinal ambience is of the highest priority for them.

EnteroVet contains digestive essential oils and important essential fatty acids. They particularly stimulate the secretion of bile and enzymes in the intestinal tract, which optimizes digestion. Less harmful metabolites are produced, the feed is better absorbed, and the immune system is strengthened.

optimizes the intestinal flora
strengthens the immune system
performance enhancement and stabilization through improved feed conversion
especially proven product in turkey fattening
