| <b>Product number</b> | 174   |
| <b>Weight</b>         | 1kg   |
| <b>Length</b>         | 99mm  |
| <b>Width</b>          | 99mm  |
| <b>Height</b>         | 222mm |

## Product description

Rot (aerobics) and putrefaction (anaerobic) are opposing decomposition processes of organic mass, such as manure.

privet HuminoVet Granulate promotes aerobic rotting, which brings the following advantages:- healthy stable air-  
reduction of germ pressure- rotting of manure- healthy, powerful animals

- less floating layers
- restriction of antibiotics

Manure in the rotting process eliminates breeding grounds of the pathogens!

## Product properties

**Composition** Humus, Rock flour, Diatomaceous earth (kieselgur)
